

A3

Guildford air quality project Proposed footway changes

National Highways is seeking ways to reduce the impact of poor air quality on people, particularly near the A3 carriageway where nitrogen dioxide levels (NO₂) are higher.

Our monitoring shows that NO₂ levels are above the legal threshold on the footway next to the east side of the A3 carriageway, from Egerton Road to the A31 Farnham Road Junction.

We are proposing, subject to a Traffic Regulation Order, to close these sections of the footway until air quality improves. Before closing these sections, we will upgrade alternative routes to improve accessibility and surfacing.
